

Exercise 2: Writing Basic JUnit Tests

StudentGrade.java:

```
package org.example;

public class StudentGrade {

    public String getGrade(int marks) {

        if (marks >= 90)
            return "A";
        else if (marks >= 75)
            return "B";
        else if (marks >= 60)
            return "C";
        else if (marks >= 40)
            return "D";
        else
            return "F";
    }
}
```

StudentGradeTest.java:

```
import org.example.StudentGrade;
import org.junit.Test;
import static org.junit.Assert.assertEquals;

public class StudentGradeTest {

    StudentGrade grade = new StudentGrade();

    @Test
    public void testGradeA() {
        assertEquals("A", grade.getGrade(95));
    }

    @Test
    public void testGradeB() {
        assertEquals("B", grade.getGrade(80));
    }

    @Test
    public void testGradeC() {
        assertEquals("C", grade.getGrade(65));
    }
}
```

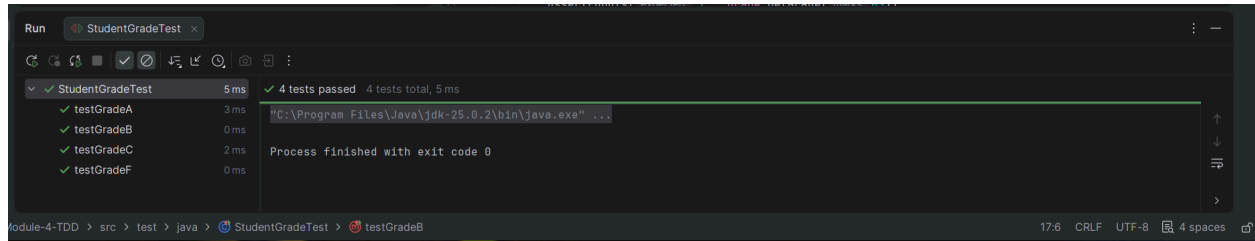

```

    }

    @Test
    public void testGradeF() {
        assertEquals("F", grade.getGrade(20));
    }
}

```
