

Exercise 1: Mocking and Stubbing

Code:

API.java:

```
package org.example;

public class API {

    public String getName() {
        return "Adit";
    }
}
```

Booking.java

```
package org.example;

public class Booking {
    API api = new API();

    public String Booking() {
        return ("Booked for "+api.getName());
    }
}
```

BookingTest.java

```
package org.example;
import org.junit.jupiter.api.extension.ExtendWith;
import org.mockito.*;

import org.junit.jupiter.api.Test;
import org.mockito.junit.jupiter.MockitoExtension;

import static org.junit.jupiter.api.Assertions.assertEquals;
import static org.junit.jupiter.api.Assertions.assertTrue;
import static org.mockito.Mockito.when;

@ExtendWith(MockitoExtension.class)
class BookingTest{

    //Created Fake object
    @Mock
    API api;

    //The class into which mocks will be injected
    @InjectMocks
```

```
Booking booking;

@Test
void bookingTest() {
    when(api.getName()).thenReturn("Advay");
    assertEquals("Booked for Advay" , booking.Booking());
}
}
```

Results:
