

8. ReactJS-HOL

Project Structure

CountPeople.jsx

```
import React from 'react';

export class CountPeople extends React.Component {
  constructor() {
    super();
    this.state = {
      entrycount: 0,
      exitcount: 0,
    };

    this.updateEntry = this.updateEntry.bind(this);
    this.updateExit = this.updateExit.bind(this);
  }

  updateEntry() {
    this.setState((prevState, props) => {
      return { entrycount: prevState.entrycount + 1 };
    });
  }
}
```

```

    }

    updateExit() {
      this.setState((prevState, props) => {
        return { exitcount: prevState.exitcount + 1 };
      });
    }

    render() {
      return (
        <div className="counter-card">
          <div className="counter-row">
            <button onClick={this.updateEntry}>Login</button>
            <span>{this.state.entrycount} People Entered!!!</span>
          </div>
          <div className="counter-row">
            <button onClick={this.updateExit}>Exit</button>
            <span>{this.state.exitcount} People Left!!!</span>
          </div>
        </div>
      );
    }
  }

export default CountPeople;

```

App.jsx

```

import CountPeople from './Components/CountPeople';
import './App.css';

function App() {
  return (
    <div className="App">
      <CountPeople />
    </div>
  );
}

```

```
export default App;
```

Output
