

15. ReactJS-HOL

ProjectStructure

ComplaintRegister.jsx

```
import React from 'react';

export class ComplaintRegister extends React.Component {
  constructor() {
    super();
    this.state = {
      ename: '',
      complaint: '',
    };

    this.handleChange = this.handleChange.bind(this);
    this.handleSubmit = this.handleSubmit.bind(this);
  }

  handleChange(event) {
    this.setState({ [event.target.name]: event.target.value });
  }
}
```

```

handleSubmit(event) {
  const transactionID = Math.floor(Math.random() * 100);
  const msg =
    'Thanks ' +
    this.state.ename +
    '\n Your Complaint was Submitted, Transaction ID: ' +
    transactionID;
  alert(msg);
  event.preventDefault();
}

render() {
  return (
    <div className="complaint-register">
      <h1>Register your complaints here!!!</h1>
      <form onSubmit={this.handleSubmit}>
        <label>
          Name:{' '}
          <input
            type="text"
            name="ename"
            value={this.state.ename}
            onChange={this.handleChange}
          />
        </label>
        <br />
        <label>
          Complaint:{' '}
          <textarea
            name="complaint"
            value={this.state.complaint}
            onChange={this.handleChange}
          />
        </label>
        <br />
        <button type="submit">Submit</button>
      </form>
    </div>
  );
}

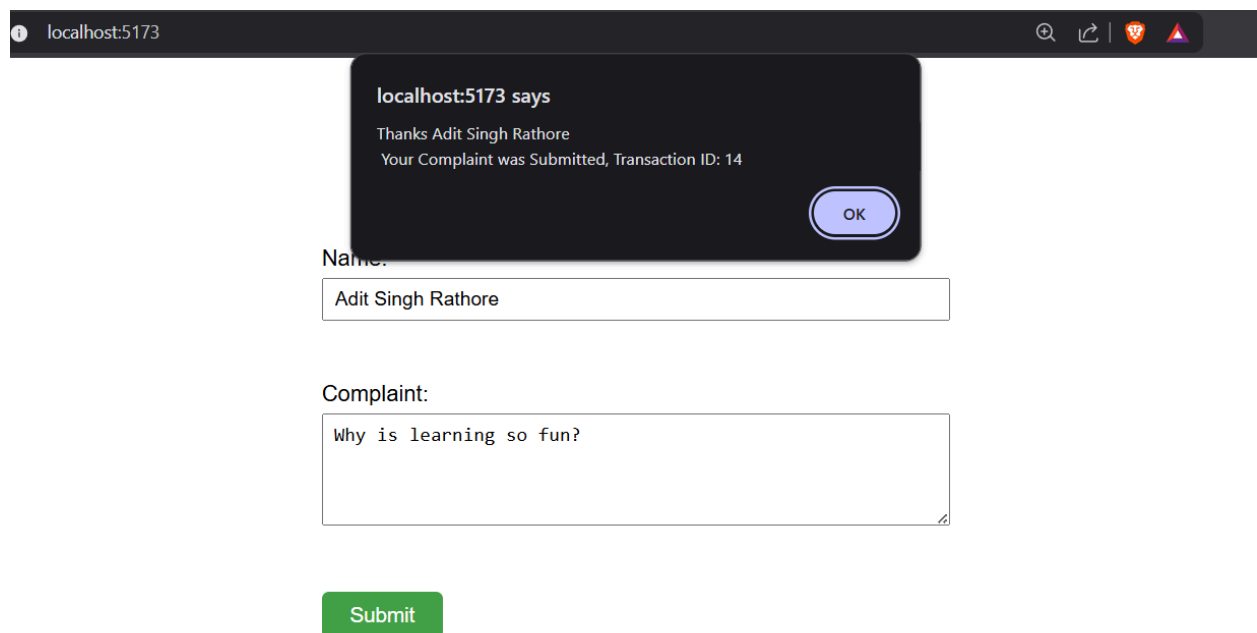

```

```
}  
  
export default ComplaintRegister;
```

App.jsx:

```
import ComplaintRegister from './Components/ComplaintRegister';  
import './App.css';  
  
function App() {  
  return (  
    <div className="App">  
      <ComplaintRegister />  
    </div>  
  );  
}  
  
export default App;
```

Output:

localhost:5173

localhost:5173 says
Thanks Adit Singh Rathore
Your Complaint was Submitted, Transaction ID: 14
OK

Name:
