

17. ReactJS-HOL

GetUser.jsx

```
import React from 'react';

export class Getuser extends React.Component {
  constructor() {
    super();
    this.state = {
      person: {},
      loading: true,
    };
  }

  async componentDidMount() {
    const url = 'https://api.randomuser.me/';
    const response = await fetch(url);
    const data = await response.json();
    this.setState({ person: data.results[0], loading: false });
    console.log(data.results[0]);
  }

  render() {
    if (this.state.loading) {
      return <p>Loading user...</p>;
    }

    const { person } = this.state;

    return (
      <div className="user-card">
        <img src={person.picture.large} alt="user" />
        <h1>
          {person.name.title} {person.name.first}
        </h1>
      </div>
    );
  }
}
```

```
export default GetUser;
```

App.jsx

```
import GetUser from '../Components/Getuser';
import './App.css';

function App() {
  return (
    <div className="App">
      <Getuser />
    </div>
  );
}

export default App;
```

Output;
